SKILLS

- Programming Languages:
 - C# (.NET)
 - JavaScript(Node.js)
 - Kotlin
 - TypeScript
 - C++
 - PHP
- Database Management Systems:
 - MySQL
 - PostgreSQL
 - SQLite
- Project Management Tools:
 - Trello
 - Jira

EDUCATION

BSc Information Science

Addis Ababa University, Addis Ababa
2022 – 2026 (Expected Graduation)

ACHIEVEMENT

3rd Place – She Codes Hackathon (2024)

Achieved 3rd Place in the She Codes Hackathon, a competitive women's tech event held across 14 universities with 47 participating teams, for developing an innovative project in a collaborative, high-pressure environment.

Completed Internship

Completed a practical internship at Nael Production, where I contributed to tech-related tasks, collaborated with the team, and received a recognition certificate for strong performance and commitment.

LANGUAGES

- Amharic - Native
- English - Native

SUMMARY

I'm a third-year Information Science student at Addis Ababa University with a strong interest in web and mobile development, content planning, and tech-enabled problem solving. I've built projects using modern tools, managed academic and personal tasks effectively, and supported others through tutoring and digital content creation. I'm organized, quick to learn, and passionate about using my skills in real-world settings. I'm especially excited about roles that offer opportunities to grow, contribute to a team, and work on meaningful projects that create impact.

PROJECTS

AAU Assistant (React, Node.js, AI API)

- Built an AI-powered chat platform for freshmen at Addis Ababa University using React and Node.js.
- Integrated custom-trained data and AI APIs to deliver accurate responses from stored university-related information.

[see code on GitHub](#)

KIDS Store (React, Node.js, Stripe, AI)

- Developed a full-featured e-commerce site for kids' products with secure Stripe payment integration.
- Added AI-driven support and category-based product recommendations for mothers and children.

[see code on GitHub](#)

Expense Tracker Mobile App (Kotlin, SQLite – ROOM)

- Designed and built an Android app to track income and expenses with categorized summaries.
- Implemented ROOM database for persistent storage and integrated data analysis features.

[see code on GitHub](#)

Blog Website (React, Node.js, MVC, AI)

- Created a user-focused blogging platform with AI-assisted content and title suggestions.
- Implemented full CRUD functionality, user profiles, post saving/reacting, and a structured MVC backend.
